

# Yeet 1 (INTRO)

---

## Auteur(s)

Senkei

## Catégorie

Jail

## Description:

Un étudiant te propose un petit défi. Ne cherche pas trop loin !

**Flag** : UH0CTF{Fake\_flag}

[yeet.py](#)

---

## Solution

```
eval(ord('𐀀')) = 9580
```

Il suffit d'envoyer `ord('𐀀')` pour avoir le flag.

**Flag** - UH0CTF{J4IL\_CE\_PL4ISIR}

## Hosting

This challenge should be a Docker container that runs `python3 chall.py` on port 40014. All the proper files are included in here. The command to build the docker container is (when located inside of this directory):

```
sudo docker build -t yeet1 .  
sudo docker network create -d bridge yeet1
```

The command to start the challenge is:

```
sudo docker run -p 40020:40020 --detach --name yeet1 --network yeet1  
yeet1:latest
```

The command to stop the challenge (since CTRL+C won't work) is:

```
sudo docker stop yeet1
```
